

SERVICE BRIEF

Network Security - Monitoring and Maintenance

How secure is your network? Are you at risk?
It's time to get proactive!

Protect your Business Inside and Out

The Internet offers significant benefits to small and medium-sized businesses, but with it comes many potent security issues. From Malware to Data Theft, layering protection into your current I.T.

infrastructure is becoming more and more important every day. We can help you by reviewing your company's needs and finding a solution that works best for your business.

Content Filtering

Protect your Users from Harmful Internet Content

Block inappropriate websites and content from entering your network. Do you have employees getting distracted at work with social networks like Facebook and Twitter? Do you want to improve the work environment by blocking adult content that is simply not tasteful? Our flexible content filters solutions can be set up with customized policies that keep your employees from getting distracted with sites that might keep them from doing their job, while still allowing them to search and browse the web as needed. Content filtering works in concert with your firewall solution to block malware (which is often found on inappropriate sites anyway!) to keep your I.T. infrastructure safe and secure.

Antivirus

Spyware, Malware, Worms... the threats are abundant.

Ever since the Internet began incorporating itself into everyone's lives, viruses and spyware have done the same. Today, there are hundreds of thousands of viruses, and the number keeps growing. Viruses can cause a lot of problems for businesses, slowing workstations and networks down to a crawl, and can often be attributed to data loss. As part of our proactive I.T., we keep your antivirus licenses and definitions up to date to protect your bottom line. Our antivirus solution has a small footprint, keeping workstation bottlenecks at a minimum.

Firewalls and Network Protection Infrastructure

Prevent Threats from Entering your Infrastructure

While Antivirus is vital to ensure a healthy I.T. infrastructure, precautions can be taken to stop viruses from entering your infrastructure in the first place. Prevent workstation downtime and slowness issues by locking down your network behind a Firewall. We can help pick out the best Firewall solution for your business, getting you the most for your budget. In fact, our solutions offer enterprise-level features for a small-business price. Stop dealing with workstation-based software firewalls that drastically slow down your end-users' computers. Prevent harmful intrusion issues before you have to deal with them.

Features

- 24x7x365 Network Monitoring, Security, and Maintenance
- Managed Antivirus Protection
- Malware Protection
- Content Filtering and Blacklisting
- Managed & Monitored Firewall Solutions
- Flexible to match your needs

Benefits

- Protect your network from harmful viruses and malware
- Antivirus License Management
- Protect yourself against external network attacks
- Block unwanted and inappropriate content from your users
- Blacklist sites that waste customer time such as YouTube and Social Networks
- Keep your network from getting bogged down, allowing users to be more efficient.
- Flexible and customizable to meet your organization's needs.
